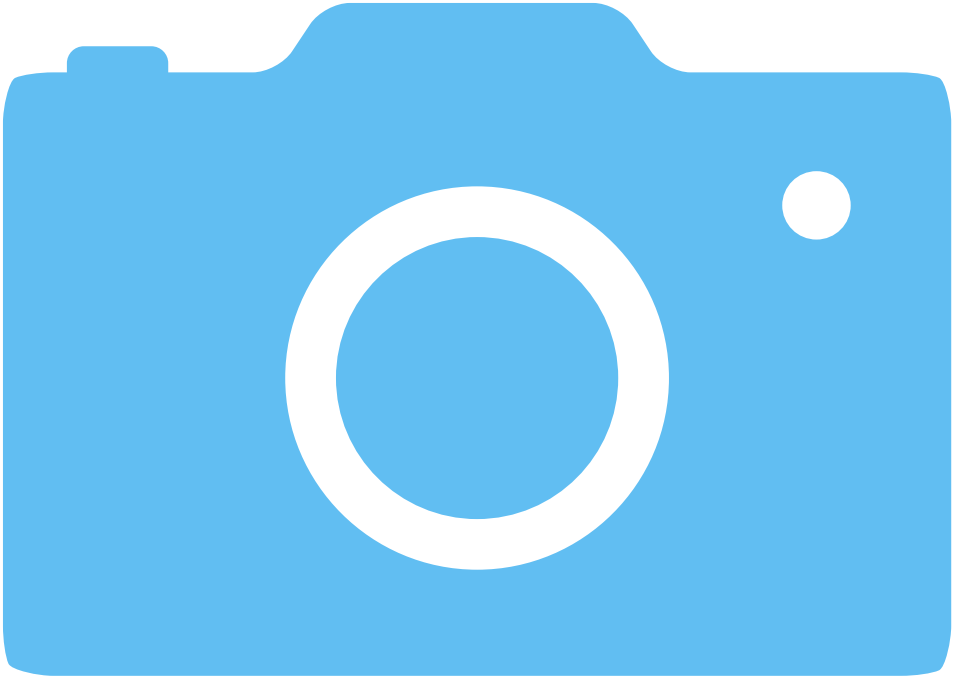
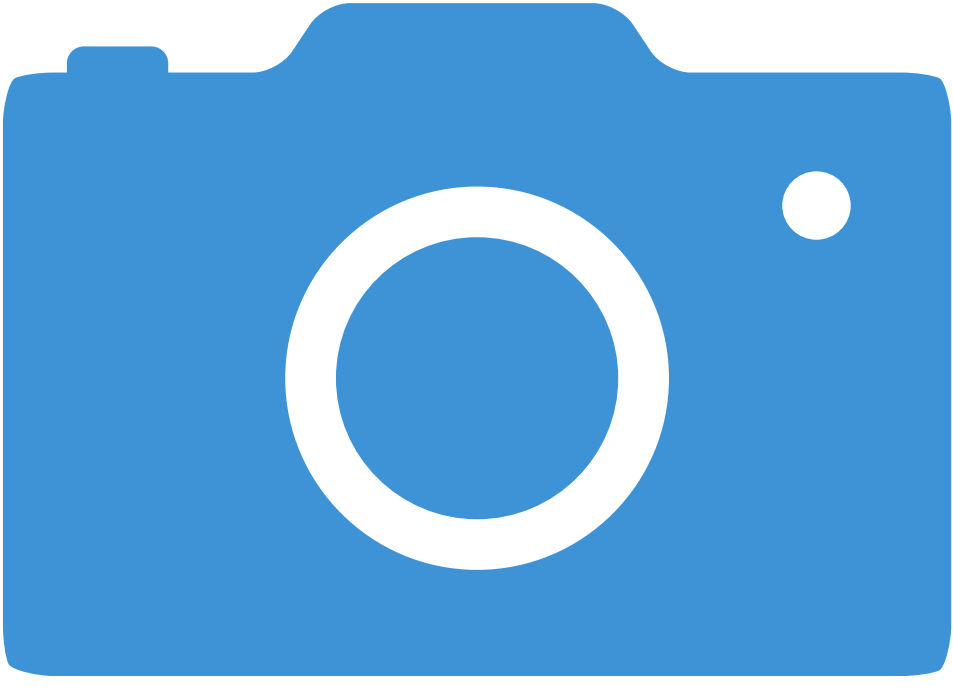
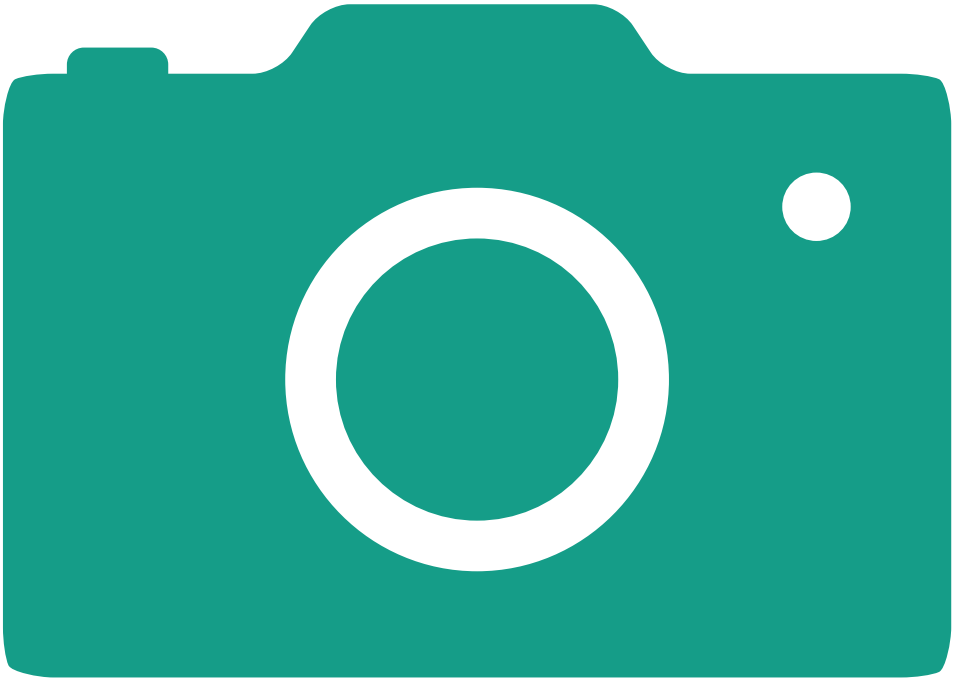
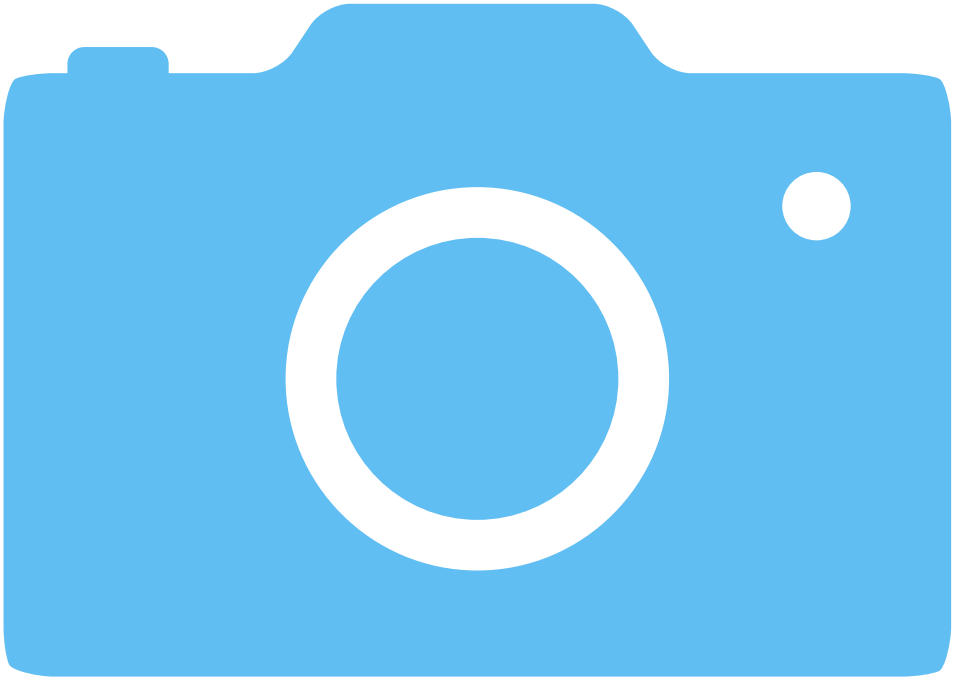
Branching & Merging

* Create a parallel version of a repository
* Work on some new feature without messing with “master” branch
* Merge branch when new feature is done
* Change which branch you’re editing with `git checkout <branch name>`



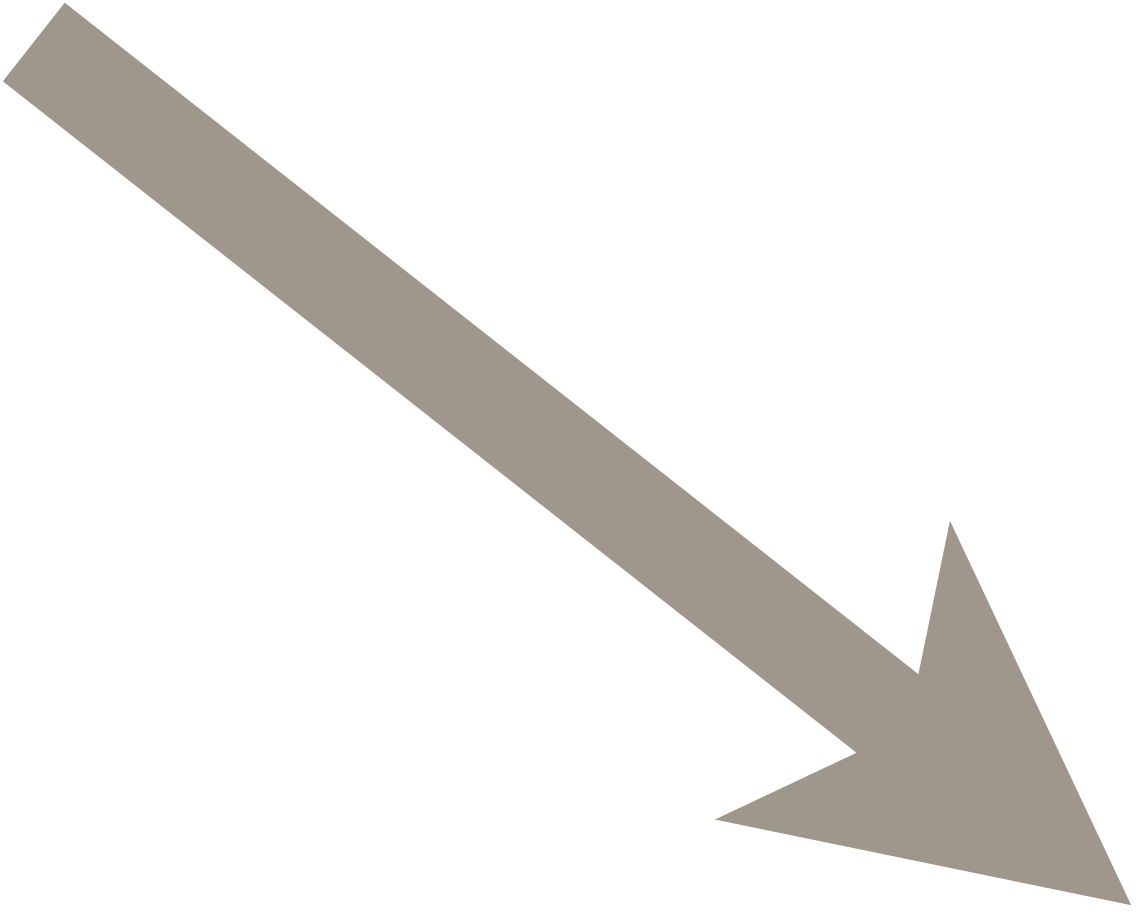






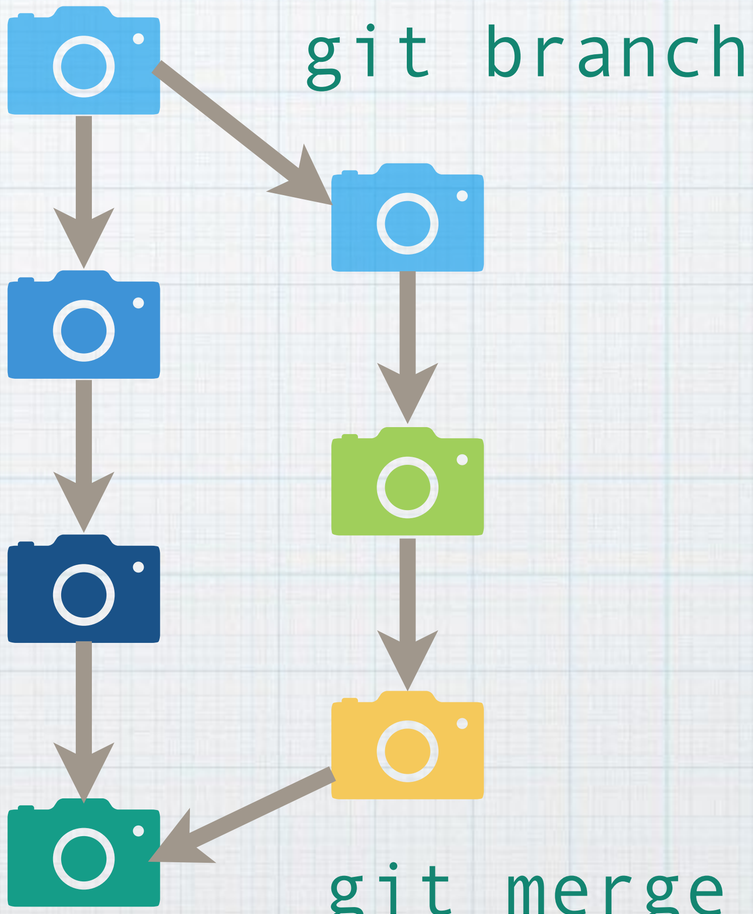
git branch

git merge



Branching & Merging

- Create a parallel version of a repository
- Work on some new feature without messing with “master” branch
- Merge branch when new feature is done
- Change which branch you’re editing with `git checkout <branch name>`



How do I stop tracking something?
