Closes # None

This is a draft of the circleci config for testing.

The current config *should* clone the repo, run flake8 and pytest on the code, check the preconditions of pypi, and finally upload to pypi if there is a tag specified.

(I don't know how the authentication for upload to pypi works)

[Manage variables from circleci](#)

This is loosely based on the configs on [tedana](#) and [fmriprep](#)

jdkent added some commits a day ago

replace tedana with NiMARE

57940db

strip down config.yml to basics

60ece3c

check precondition of pypi

8e77418

Opening a pull request

Two options:

1. Submit from command line:

```
git request-pull <upstream  
branch> <your-url> <your-  
branch>
```

2. Submit from github.com

Comparing changes

Choose two branches to see what's changed or to start a new pull request. If you need to, you can also [compare across forks](#).

base fork: neurostuff/NiMARE ▾

base: master ▾

head fork: 62442katieb/NiMARE ▾

compare: master ▾

✓ **Able to merge.** These branches can be automatically merged.

Create pull request

Discuss and review the changes in this comparison with others.

This seems to be hardcoded to a path true only on your machine.

 62442katieb 10 hours ago
